AUTHOR: Căţuneanu, V.M., Engineer, Candidate of Technical Sciences

TITLE: Considerations on the algebraic theory of switching circuits with magnetic cores

PERIODICAL: Telecomunicatii, no. 4, 1962, 150-158

TEXT: The paper presented at the 2nd national meeting on semi-conductors and their application held in Dec 1961 describes the basic conditions for the integration of the algebraic theory of magnetic-core switching circuits into the theory of non-contact switching circuits. In an attempt to solve this problem the author used deductions by Gr.C.Moisil (Ref. 2: Teoria algebrică a circuitelor cu tranzistoare, partea I /The algebraic theory of transistor circuits Part 1/, Automatica şi Electronica, 5, no. 3, 1961, 101-104). Two main functional systems of magnetic-core switching circuits are described and computed. They refer to non-feedback and feedback circuits. All magnetic-core switching circuits may be combined from two basic circuits, designated as "Circuitul TOT" (ALL circuit) symbolized by T and "circuitul NIMIC" (NOTHING circuit) symbolized

Considerations on the algebraic theory .....

by N. The non-feedback switching circuits obtained by the combination of these two basic circuits are the OR-circuits, inhibition circuits, inverter circuits based on logic negation and defined by the NOT function, AND-circuits, circuits realizing the first and the second Scheffer functions and EXCLUSIVE-OR circuits. The described feedback circuits are: the AND-circuit using internal feedback, the frequency divider circuit, the inhibition circuit with positive feedback also called TRIGHER DINAMIC (DYNAMIC TRIGGER CIRCUITS) symbolized by TD and TRIGHER DE NUMĂRARE (COUNTING TRIGGER CIRCUITS) symbolized by TN. These basic circuits may easily be established provided that 0 and 1 discrete variables are binary, that is that they refer to the dynamic effect produced by the transference of one magnetization condition into another. The T connecting circuit transfers all that is fed at the input to the output. A circuit leading to a zero output regardless of the input is an N circuit. All magnetic-core logic switching circuits can be obtained by combining the 2 basic circuits shown in Fig. 1 in which (1a) represents a magnetic core in the shape of a horizontal bar with a rectangular hysteresis loop. The article shows that T and N circuits can be used to obtain conventional switching circuits, and establishes the corresponding Boolean algebraic equations. Analysis and synthesis of magnetic-

AUTHOR: Căţuneanu, V.M., Engineer, Candidate of Technical Sciences

TITLE: New arrangements of magnetic-core switching circuits

PERIODICAL: Telecomunicaţii, no. 5, 1962, 193 - 198

TEXT: The article presents a magnetic-core bistable dynamic trigger, two new counting triggers, i.e. a multiple-control counting trigger and a power counting trigger, as well as a new frequency divider. The bistable dynamic trigger, TD-2, has two inputs, A and B, and two outputs, $W_1$ and $W_2$, and consists of four cores. Cores I and III form the elementary T-type circuits and cores II and IV the N-type circuits. By combining the functions of cores I and IV, as well as those of cores II and III in one core each, a trigger arrangement with two magnetic cores, shown in Fig. 2, is obtained. Experiments were conducted with this arrangement by using beat impulses with an amplitude of 4 amp, a period of 7 μsec, a front of 1.5 μsec and a frequency of 2 kcps, producing at the output, impulses with an amplitude of 18 ma. In some cases it is necessary to set the motion, or block the dynamic trigger part, without affecting the inhibiting part

APPROVED FOR RELEASE: 06/09/2000 CIA-RDP86-00513R000308010018-0"

"APPROVED FOR RELEASE: 06/09/2000 CIA-RDP86-00513R000308010018-0

of the counting trigger. The arrangement of such a multiple-control counting trigger, TN-M, is shown in Fig. 4. The signals obtained experimentally at the output of this arrangement are stable but have a low amplitude ranging between 10 and 12 ma. In certain cases, however, it is necessary to have at both outputs of the counting trigger signals with a high amplitude, in order to switch 2 - 3 cores under load on every output. The arrangement of the power counting trigger, TN-P, which may achieve this, is shown in Fig. 8. This power counting trigger achieved output signals of double amplitude as compared with usual counting triggers. The new frequency divider, DF-n, is based on the operation of the NICI function, Sheffer's first function, with negative reaction. This 1:n frequency divider, shown in Fig. 12, proved that no additional measurements, such as those required by the ring-type frequency dividers with positive reaction are necessary. There are 13 figures and 3 tables. The English-language reference reads as follows: V. L. Newhause and N. S. Prywes: High speed shift register using one core per bit; IRE Transactions on EC, Sept. 1956.

ORIG. PUB. : Kemija u industriji, 1958, 7, No 8, 203-208

ABSTRACT : The Yugoslavian economic reconstruction plan for 1957-1961 includes expansion of the manufacturing facilities for dry distillation products assigned for incressing export and utilization of wood by-products. The planned expansion includes the construction of several pyrolysis plants with the total capacity up to 200,000 m$^3$ of wood pulp per year.

YUGOSLAVIA/Electronics - Photocells and Semiconductor Devices H-8

Abs Jour : Ref Zhur - Fizika, No 8, 1958, No 18475

Author : Cavic B.N.
Inst : Not Given
Title : Transistors or Vacuum Tubes

Orig Pub : Telekomunikasije, 1957, 6, No 1, 16-20

Abstract : A comparison is given of the characteristic properties of transistors and vacuum tubes (with allowance for the possibility of their manufacture and use). When considering the electric properties of these elements, a comparison is made of their equivalent circuits and characteristics ($I_g = f(U_g)$ of a pentode with $U_c = f(I_c)$ of the junction transistor), and also connection diagrams for grounded cathode, anode, and grid (for tube) and emitter, collector, and base (for transistor). It is assumed here that the functions of the corresponding electrodes of the vacuum tube (pentode) and transistor are equivalent. A comparison is made of the technical data (service life, effective temperature and frequency, dimensions, etc).

Savisha, Vladimir Vladimirovich

Hydraulic steering machines (Gidravlicheskiye rulevyye mashiny) Moscow, Izd-vo "Transport", 65. 0223 p. illus., biblio. 3,500 copies printed.

TOPIC TAGS: hydraulic engineering, shipbuilding engineering, mechanical stress, hydraulic device, performance test, engine turbine system

PURPOSE AND COVERAGE: This book represents the original work in which, for the first time, the analysis of different types of hydraulic steering machines and their basic parts are described. The results of their tests, size and overall characteristic are described - which allow to determine the course of future perspective in the development of hydraulic steering machines. The solution of some theoretical problems has a practical use - connected with the exploitation of hydraulic steering machines in storm conditions and in their more higher useage. An important interest lies in the test and instructions how to operate hydraulic steering machines. This book is recommended to the wide circle of crew, engineers and technicians in shipbuilding industry, for students, and teachers of higher educational institutes of the Merchant Marine.

TITLE: Pharmacodynamic action of trimethylene bis-4-hydroxy-iminomethyl-pyridine bromide

SOURCE: Revista sanitara militara, v. 61, no. 1, 1965, 113-117

TOPIC TAGS: pharmacology, organic phosphorus compound, antidote, organic imine compound, toxicity, rat, pyridine

ABSTRACT: The authors studied the pharmacodynamic action of TMB4 on normal animals. (The compound is used as antidote for organophosphorus intoxications, and previous studies refer to its action in intoxicated animals.). They found an index of toxicity, $DL_{50}$ = 63 mg/kg ± 2.5 in rats, and found a dose of 5 mg/kg to have the following effects: nicotinolytic action; ganglioplegic action; excitation of respiration; and potentiation of ether anesthesia. Orig. art. has: 7 figures and 2 tables. [JPRS]

"Observations Concerning the Effect of Radioprotection on Irradiated and Burned Animals."

Bucharest, Revista Sanitara Militara, Vol 62, No 2, Mar-Apr 66, pp 289-297.

Abstract: A report on an experimental study to determine the radioprotective effectiveness of cystamine and cystine for burned and irradiated animals. The study, which used 180 mature rats, showed that the protected animals, especially those irradiated with 400 oentgen units, showed a more attenuated evolution of the disease and a somewhat smaller intensity of histopathologic lesions. The difference in mortality between the protected animals and the controls was not significant.

Includes 7 figures, 2 tables and 12 references, of which 5 Rumanian, 2 Russian and 5 Western. -- Manuscript submitted 19 July 1965.

TITLE: Functional exploration of the kidney with the aid of isotopic nephrograms in irradiated and burned animals

19 22

SOURCE: Revista sanitara militara, v. 61, no. 6, 1965, 981-986

TOPIC TAGS: dog, radiation biologic effect, radiation injury, excretion

ABSTRACT: Studies involving 20 dogs showed that the radio-isotopic method for the study of renal affliction is easily supported by the animals, rapid and relatively accurate. In irradiated dogs without burns, no changes in renal functions were noted by this method; third degree burns over 10 percent of the body surface aggravated the evolution of irradiation disease, with an early disturbance of renal functions.
